Experience

Wordpress Developer 2019 - 2020

Doctor Multimedia

My daily responsibilities entail scaling dozens of custom built Wordpress sites a day. I am often working with ACF and custom post types. Updates range from adding a simple popup to designing a brand new page with cooperation of the design team. I consistently correspond with clients to assure that they are satisfied with my work. In this role, I have gained hands-on experience with tools such as Salesforce and Freshdesk. During my time at this company I was able to help the development team streamline their workflow by developing a custom package to deploy new sites, creating a plugin to automate the implementation of a tedious feature, and even creating a Chrome extension that works with Salesforce to automate our login.

Wordpress Web Developer 2018 - 2020

Premiere Brand, LLC

At Premiere Brand, I am involved with sites from start to finish. My daily tasks usually entail developing or updating client sites to fit their functional and aesthetic needs. This involves customizing existing Wordpress themes, or creating a child theme allowing me to manipulate the template to tailor fit the client's needs and taste. Occasionally, I am tasked to perform a site migration. Additionally I manage a number of in house sites such as mydashuri.com, an e-commerce site. At project completion I am responsible for uploading the site to a hosting service, usually GoDaddy.

Freelance Web Developer 2016 - 2018

As a freelance developer I was responsible for communicating with clients, recognizing their needs, and making their vision come to life. I have ample experience in developing **Wordpress** sites, and developing with the MVC design pattern. In this work I have become familiar with many different hosting companies and their services, such as GoDaddy, DreamHost, BlueHost and iPage. (See www.julianhernandez.me for in depth overview of projects)

Bible Teacher (Volunteer) 2008 - Present

Watchtower Bible and Tract Society

- Responsible for teaching bible truths
- Responsible for having deep knowledge of the bible, and good study habits
- Need to be wary of specific student's needs
- Must be conscious of time and material covered
- Must monitor student's progress in knowledge and application

Education

High School Diploma 2003 - 2016

MaST Community Charter School

In MaST Charter, I took 2 semesters of Robotics, where I was taught the fundamental concepts of programming. I also took 1 semester of Game Design and used C# to create video games in the Unity Gaming Engine.

Skills

HTML + CSS

I also have experience using preprocessors such as SASS and Pug (Jade), and templating engines like Twig.

Wordpress

Skills include theme development, and child theme integration/development and theme modifications.

React.js

Node

This includes Node.js, and it's popular modules such as express and mongodb.

PHP

My skills in PHP range from building an MVC framework to creating Wordpress themes and plugins from scratch.

Git

This includes the linux command line and friends such as npm.

Projects

Paul and Barnabas

A data driven web application built on Node with Express and MongoDB + Mongoose for Jehovah's Witnesses.

Sheena Marie MUA

[\[sheenamariemua.com/\]](http://sheenamariemua.com/)

Theocratic Ministry School

2005 - Present

The Theocratic Ministry School is a school that I attend on a weekly basis, and is a school that focuses much on the arts of public speaking, and teaching. It helps me to cultivate skills such as listening, remembering, studying, doing research, analyzing, conversing and the list goes on. During my enrollment in the school, I have been able to progress in the art of public speaking and teaching, while also doing it on a weekly basis.

Advanced Javascript Course (Udemy)

- Established a foundation of javascript knowledge that I have continue to build upon.
- I was able to come to an in depth understanding of how javascript works under the hood, and also how popular frameworks like jQuery are built.

The Complete Node.js Developer Course (Udemy)

- Built REST API
- Tested with Postman HTTP app
- Learned to unit test code with chai and assertion frameworks
- Foundation of my Node.js Knowledge

Summary

- **Determined** self-starting web developer eager to use skills to make lives easier
- **Wordpress** Theme Developer
- Master at **HTML and CSS + Sass**
- Proficient with **Node.js**

This is a SPA built with wordpress. The theme was custom coded to fit the clients needs, and never requires a page reload.

ZDB Form Submission

This Web App is a form submission system for a client that wanted to go paperless. There are two sections to the site, Admin and User. This application relies heavily on a MySQL Database where all the information is saved to. It uses no framework, except an MVC pattern that was programmed to fit the project's needs. AJAX is used to create a better UX. Composer is used to manage dependencies.

Dynamic URL Constructor

URL Constructor is a javascript module I wrote to organize and construct an applications repeated URLs and endpoints. It allows the developer to write DRY code, and construct dynamic URLs to be passed around their application.
